

Epochs '26 - Assignment 9 is Live! 🌐

It's time to take your Machine Learning model beyond notebooks and into the real world!

In this challenge, you'll deploy **one of the Machine Learning models you've trained during the previous sessions** (or another suitable model of your choice) as an interactive web application that allows users to provide inputs and receive predictions in real time.

Dataset

You may use **any Machine Learning dataset covered during the bootcamp**.

Recommended Datasets:

 **CarDekho Used Car Price Prediction** (Day 5)

<https://www.kaggle.com/datasets/manishkr1754/cardekho-used-car-data>

 **Customer Churn Prediction** (Day 6)

<https://www.kaggle.com/datasets/muhammadshahidazeem/customer-churn-dataset>

You may also choose another suitable Machine Learning dataset if you wish.

What You'll Do

- ◆ Reuse or retrain a Machine Learning model from a previous assignment.
- ◆ Build a clean and user-friendly web interface.
- ◆ Integrate your trained model into the application.
- ◆ Accept user inputs and generate predictions.
- ◆ Deploy your application on a **public hosting platform**.
- ◆ Reflect on your deployment experience, challenges, and future improvements.

Suggested Hosting Platforms

You may deploy your application using any suitable platform, such as:

- Streamlit Community Cloud
- Render
- Hugging Face Spaces
- Railway
- Any other suitable hosting platform

Submission

GitHub Repository

- Complete source code
- Project files
- `requirements.txt` (or equivalent)

README.md

- Participant Name
- MUID
- Project overview
- Deployment approach
- Key observations
- Challenges faced
- Future improvements

Deployment Link

- Share the public URL of your deployed application.

Submit **both your GitHub Repository link and Deployment link** in **#epochs-submissions** using the tag:

#evn-ds-epochs26-day09

★ **Reward: 200 Karma Points**

🕒 **Deadline:** Within **48 hours** of the task being live.
